There is no hazardous ingredient in concentration greater than 1%. 2. Reactive, Weak Reactive, and Nonreactive control reagents: ASI controls contain human serum or defibrinated plasma with 0.1% sodium azide as a preservative. All compounds derived from human source materials have been tested at the donor level and found to be nonreactive for HBsAg and for HIV-1, HIV-2, and HCV antibodies. Because no known test offers complete assurance that infectious agents are absent, all materials derived from human blood should be handled as if capable of transmitting infection.
